

PROJECT VITALITY

A Nation Building Impact Chapters Initiative

❖ The Problem:

College students face increasing health neglect due to academic pressure, poor dietary habits, and lack of access to preventive health services.

There is no structured system on campus that regularly checks or educates students about their health.

❖ The Vision:

To build a healthier college ecosystem by promoting awareness and providing accessible health check-ups that empower students to take charge of their wellbeing.

Project Vitality aims to make health monitoring and preventive care an integral part of campus life.

❖ Core Objectives:

Goal	Outcome
Raise Awareness	Through seminars, workshops, and verified social media content on nutrition, lifestyle, and preventive care.
Enable Access	On-campus health check-up desk offering basic tests and professional guidance.
Provide Insight	Personalized health reports highlighting key physical markers and improvement areas.
Promote Prevention	Early detection of risks through optional advanced screenings in collaboration with hospitals or labs.
Build Sustainability	Institutionalize annual health check-ups and student-led wellness drives.

❖ Implementation Framework:

PHASE 1: DISCOVERY & PLANNING

1. Conduct a short survey to understand student health needs and awareness levels.
2. Identify and onboard partner medical professionals (doctor, dietitian, lab/hospital).
3. Coordinate with college administration for permissions and logistics.

Output: Baseline Report + Stakeholder Map + Health Priority Metrics

PHASE 2: DESIGN & PREPARATION

1. Plan awareness seminars and workshops with health professionals.
2. Develop social media content calendar for consistent health education.
3. Design the health check-up flow: registration, testing, reporting, and counseling.
4. Prepare health report templates and feedback forms.

Output: Program Framework + Content Plan + Resource Kit

PHASE 3: EXECUTION & ENGAGEMENT

1. Conduct health check-up on campus with:
 - Certified doctor for physical assessment (weight, BP, heart rate, vision, visible markers).
 - Optional advanced tests (HbA1C, lipid profile) through partner lab.
 - Dietitian for personalized diet and lifestyle recommendations.
2. Hold 2–3 awareness seminars on nutrition, exercise, and stress management.
3. Publish educational posts regularly on social media to sustain engagement.

Output: Health Reports + Student Feedback + Event Documentation

PHASE 4: FOLLOW-UP & INSTITUTIONALIZATION

1. Compile data and insights into a “Campus Health Report.”
2. Train volunteers to sustain Project Vitality as a recurring initiative.

Output: Sustainability Framework + Annual Wellness Calendar

❖ **Expected Outcomes:**

- Increased student awareness of personal health status and risk factors.
- Early detection of common issues like anemia, hypertension, or stress-related symptoms.
- Improved health literacy through continuous education.
- Establishment of a sustainable on-campus preventive healthcare model.
- Recognition of the college as a wellness-first campus.

❖ **Long-Term Vision:**

Project Vitality aims to become a replicable model for student wellness across Delhi University colleges, creating a network of health-aware campuses that prioritize preventive care, fitness, and holistic wellbeing of students
