

Project Vitality

Cultivating a Health-Conscious Campus at Sri Venkateswara College

The Health Gap: Why This Matters

The Routine: College students often neglect physical health due to irregular routines, poor diet choices, and low nutritional awareness.

Hostel & PG Living: Heavy reliance on hostel/PG food, processed snacks, and caffeinated drinks.

The Impact: This lifestyle results in fatigue, weight gain, and long-term health risks.

The Core Problem: There is a critical lack of regular health check-ups and tracking mechanisms on campus.

Our Mission: A Sustainable, Student-Led Future

"To design and implement a sustainable, student-led health initiative that improves dietary awareness and encourages healthier habits through education, testing, and actionable insights, despite limited resources and expert availability."

Sustainability: Focused on long-term dietary shifts and a lasting health-conscious environment.

Student-Led: Driven by student engagement and peer-to-peer education.

The Strategy: Our Three Pillars

All activities are categorized into three pillars to ensure a balanced approach:

Vertical 01 | Awareness

Building the brand and prioritizing health through seminars, digital campaigns, and myth-busting reels.

Vertical 02 | Impact

Direct interventions, including student health camps and the creation of canteen health menus.

Vertical 03 | Research

Using data to understand needs and validate interventions via surveys, nutrition reports, and impact assessments.

Our Constraints

Time Poverty

Student bandwidth is limited by academics; initiatives must be high-impact or easily digestible.

Limited Resources

Operations must optimize for cost-effectiveness, especially for large-scale medical interventions.

Expertise Gap

External partnerships must be leveraged for medical and nutritional credibility.

Cultural Resistance

Engagement requires "fun" and "cool" factors rather than a strictly clinical approach.

Vendor Dynamics

Canteen audits require sensitive handling to maintain healthy vendor relationships.

Defining Success: Measuring Meaningful Change

Qualitative Indicators

- Increased awareness regarding calorie balance and nutrition labels.
- Establishment of a visible, health-conscious campus culture.

Quantitative Metrics

Engagement: Total attendance at seminars and health camps.

Research Done: Completion of health surveys, nutrition reports, and data-driven assessments

Health Markers: Measurable improvement in indicators like BMI and self-reported energy levels.
