

Program Title: Project Vitality

Problem Statement Definition:

How can Project Vitality help college students understand and improve their health through awareness sessions and an on-campus health check-up program conducted within the academic year 2025–26?

The goal is to make students aware of their physical condition and encourage preventive lifestyle improvements.

1. Context:

College students often ignore basic health indicators due to academic pressure, limited access to doctors, and lack of information.

Common undetected issues include poor nutrition, low hemoglobin, high blood pressure, and stress-related problems.

The college currently lacks a structured system for regular health check-ups or education on physical wellbeing.

2. Criteria for Success:

Conduct at least one full-scale health check-up camp with certified doctors and dietitians.

Each participant receives a personalized health report with key parameters like weight, BP, heart rate, and visible health markers.

Organize at least two seminars or workshops led by professionals to raise awareness on health and nutrition.

Maintain an active social media page that posts verified health and nutrition content.

Define metrics

3. Scope for Solution Space:

Awareness aspect: Organizing seminars, workshops, and regular educational posts on social media.

Health check-up aspect:

Setting up an on-campus desk with a certified doctor.

Testing weight, blood pressure, heart rate, vision, and visible health markers (hair density, skin dryness, paleness, tan).

Providing a complete health report to each participant.

Including optional advanced assessments like body composition analysis and free blood tests (HbA1C, lipid profile) in collaboration with a hospital or lab.

A dietitian present to give simple diet and lifestyle advice.

4. Constraints within Solution Space:

Budget limitations for hiring doctors, dietitians, and renting equipment.

Need for official permissions and space allocation.

Limited student time during academic hours.

Dependence on hospital or lab partnerships for advanced testing.

Managing participant data privacy.

5. Stakeholders:

Students (beneficiaries)

College administration and faculty advisors

Partner hospital or diagnostic lab

Certified doctor(s) and dietitian(s)

Student volunteers and organizing team

6. Key Sources of Insight:

Student health concerns identified through informal surveys or feedback.

Discussions with campus medical staff.

Inputs from partner hospital or lab professionals.

Government and WHO data on youth health issues (e.g., anemia, obesity, stress).
