

Project Vitality: Impact-Feasibility Matrix & Grading Report

Target Campus: Sri Venkateswara College (SVC), Delhi University
Author: Agent 5 (The Grader)
Reference Document: auditor_check.md by Agent 4 (The Auditor)

Impact-Feasibility Matrix Overview

The 13 refined and audited campus wellness frameworks have been graded based on two primary dimensions: 1. **Impact (Biomarker Enhancement):** Directness of physiological biomarker improvement (e.g., cortisol, resting heart rate [RHR], blood pressure [BP], fasting blood glucose, lipid profiles, hydration, Vitamin D, and B12). 2. **Feasibility (Zero-Budget Compliance & Low Friction):** Operational ease, including zero-budget adherence, student volunteer time/burnout prevention, legal compliance (DPDP Act 2023), and avoidance of administrative/vendor hurdles.

4-Quadrant Matrix

	High Feasibility	Medium Feasibility
High Impact	Quadrant 1: Quick Wins / Primary Focus* [2.4] Impromptu Physical Challenges	Quadrant 2: Strategic Long-Term Projects [2.1] Canteen Condition Analysis [2.2] On-Campus Biomarker Health Camp* [2.3] VenkyWalks (Gamified Step Leagues)
Medium/Low Impact	Quadrant 3: Easy Digital Nudges [1.1] Digital Canteen Guide [1.2] Mythbusters Infographic Series [1.4] Dorm Room Hacks Video Series [1.5] Nutrition Decoder Carousel [3.1] Annual Campus Health Census [3.3] Reference-Based Food Estimation	Quadrant 4: Secondary or Seasonal Initiatives [1.3] Vitality Micro-Broadcasts [1.6] Seminars with Industry Experts* [3.2] PG & Outstation Diet Diaries

Detailed Grading of the 13 Frameworks

Quadrant 1: High Impact, High Feasibility (Quick Wins / Primary Focus)

[2.4] Impromptu Physical Challenges

- **Impact Score: High**
Rationale: Spontaneous physical challenges like push-ups, pull-ups, squats, or planks trigger acute muscular recruitment, facilitate immediate postprandial glucose clearance, and stimulate short-term adrenaline and dopamine release, improving metabolic resilience.
- **Feasibility Score: High**
Rationale: Zero budget required as it utilizes basic portable floor mats or pull-up bars. Requires minimal volunteer hours to monitor the challenge desk during lunch breaks, and carries low student resistance due to high crowd-competitive appeal.

[!IMPORTANT] > **Audited Tweak Integrated:** Integrates a pre-participation digital health screener declaring no joint or cardiovascular injuries, and includes automatic smog/heat suspension logic.

Quadrant 2: High Impact, Medium Feasibility (Strategic Projects)

These initiatives offer major physiological benefits but carry higher volunteer overhead, weather constraints, or administrative coordination barriers.

[2.2] On-Campus Biomarker Health Camp (Refined)

- **Impact Score: High**

Rationale: Directly measures critical biomarkers (HbA1c, lipids, CBC, Vitamin D/B12). Testing allows students to identify and correct clinical deficits under medical supervision.

- **Feasibility Score: Medium**

Rationale: Requires written approvals from the College Principal and Proctor, coordinating a physical courtyard desk layout, and setting up student self-payment directly to the clinical partner's portal.

[!IMPORTANT] > **Audited Tweak Integrated:** Camp is operated 100% by the partner laboratory's clinical staff. Registrations and payments are done directly on the lab's portal. Project Vitality volunteers act solely as logistical facilitators and never touch or store student names, contact details, or diagnostic reports, achieving 100% DPDP Act compliance.

[2.1] Canteen Condition Analysis & Zero-Cost Upgrades (Refined)

- **Impact Score: High**

Rationale: Auditing canteen conditions and implementing zero-cost upgrades (such as keeping salt shakers off dining tables and offering raw sprout/vegetable cups on demand) directly blunts passive sodium consumption and improves daily glycemic and micronutrient profiles.

- **Feasibility Score: Medium**

Rationale: Requires coordinating student petition signatures to prove demand and pitching the zero-cost checklist to canteen managers and deans to gain backing.

[!IMPORTANT] > **Audited Tweak Integrated:** Framed as a collaborative optimization project to help contractors increase footfall and goodwill rather than a hostile audit. Proposals must use general research databases to avoid targeted defamation.

[2.3] VenkyWalks (Gamified Step Leagues)

- **Impact Score: High**

Rationale: Gamified step count increases daily energy expenditure, blunts postprandial glucose spikes, and improves heart rate variability (HRV) and cardiovascular tone.

- **Feasibility Score: Medium**

Rationale: Requires ongoing volunteer coordination to verify logs, manage partnerships for store vouchers, and navigate Delhi's seasonal winter smog.

[!WARNING] > **Audited Tweak Integrated:** Implements an AQI Safety Protocol: outdoor walking tracking is automatically suspended if the PM2.5 AQI exceeds 250, prompting students to accumulate steps indoors (e.g., in dorm corridors or library hallways) to protect respiratory health.

Quadrant 3: Medium Impact, High Feasibility (Easy Digital Nudges)

These initiatives are educational, informational, or research-focused. While their direct physiological impact is moderate, they require zero budget, are highly engaging, and carry almost zero operational friction.

[1.1] Digital Canteen Guide (Refined from Canteen Report Card)

- **Impact Score: Medium**

Rationale: Promotes healthy food choices by highlighting "Nutritious Picks" and estimated sugar/salt profiles, aiding weight management and blood pressure stability.

- **Feasibility Score: High**

Rationale: Hosted on a free Link-in-Bio platform, avoiding print costs and campus space approvals.

[!IMPORTANT] > **Audited Tweak Integrated:** Features a permanent disclaimer that nutritional stats are database estimations, and utilizes positive-selection framing (rather than negative grades) to eliminate vendor hostility and defamation risk.

[1.2] Mythbusters Infographic Series

- **Impact Score: Low/Medium**

Rationale: Improves health literacy and corrects critical lifestyle misconceptions, though it relies on students translating this knowledge into voluntary behavior.

- **Feasibility Score: High**

Rationale: Uses free Canva templates and organic social media posts, bypassing administrative oversight.

[!TIP] > **Audited Tweak Integrated:** Includes a standardized medical disclaimer footnote on every infographic slide to shield volunteers from medical advice liability.

[1.4] Dorm Room Hacks Video Series

- **Impact Score: Low/Medium**

Rationale: Nudges students to optimize sleep posture, hydration, and micro-stretching, incrementally reducing physical strain and waking cortisol.

- **Feasibility Score: High**

Rationale: Smartphone-only shooting and standard video templates minimize editing overhead.

[!IMPORTANT] > **Audited Tweak Integrated:** Enforces a strict "Creative Guidelines Checklist" preventing the creation of videos featuring hazardous electrical, fire, or food preservation hacks.

[1.5] Nutrition Decoder Carousel (Refined from Vending Machine QR Campaign)

- **Impact Score: Medium**

Rationale: Visually representing the sugar/sodium content of popular vending snacks (e.g., teaspoons of sugar) shocks students into avoiding high-glycemic beverages, stabilizing insulin responses.

- **Feasibility Score: High**

Rationale: Run digitally on social channels, eliminating physical QR sticker printing, vandalism, or vendor disputes.

[!WARNING] > **Audited Tweak Integrated:** Relies strictly on nutrition facts panels printed on the packaging and uses factual, non-judgmental comparisons to eliminate trademark and defamation risks.

[3.1] Annual Campus Health Census (Refined)

- **Impact Score: Low/Medium**

Rationale: Maps student sleep, diet, and stress trends. Does not directly change biomarkers but is crucial for aligning future campaigns.

- **Feasibility Score: High**

Rationale: Free Google Forms distributed via student societies. Requires minimal volunteer effort.

[!CAUTION] > **Audited Tweak Integrated:** Form is 100% anonymous and collects zero PII. Café coupon raffle registrations are hosted on a separate, disconnected form, protecting health data privacy.

[3.3] Reference-Based Food Estimation (Refined from Canteen Staple Lab Testing)

- **Impact Score: Medium**

Rationale: Provides macro/calorie estimations of campus foods to guide student meal selections, supporting glycemic stability.

- **Feasibility Score: High**

Rationale: Bypasses chemical lab fees (Rs. 15,000+) by utilizing USDA/IFCT recipe estimation spreadsheets.

[!WARNING] > **Audited Tweak Integrated:** Presents calculations as generic item profiles (e.g., "Average Campus Samosa Profile") rather than calling out specific canteen vendors, preventing defamation.

Quadrant 4: Secondary or Seasonal Initiatives

These initiatives have lower biomarker impact and lower feasibility due to coordination overhead or high student drop-out rates, making them secondary options.

[1.3] Vitality Micro-Broadcasts (Refined from Vitality Keynotes)

- **Impact Score: Low/Medium**

Rationale: Educational broadcasts offering expert answers to student health Q&As, though it has indirect physiological impact compared to active interventions.

- **Feasibility Score: Medium/Low**

Rationale: Bypasses venue booking friction but requires significant volunteer effort to scout, schedule, and coordinate live sessions with external guest speakers.

[!IMPORTANT] > **Audited Tweak Integrated:** Student hosts read a brief speaker-liability disclaimer before each broadcast to ensure the project holds no medical liability.

[1.6] Seminars with Industry Experts (Refined)

- **Impact Score: Low/Medium**

Rationale: Provides high-credibility health talks on campus. Does not directly change biomarkers but builds cognitive alignment for active challenges.

- **Feasibility Score: Medium/Low**

Rationale: Booking spaces and coordinating with external medical PG students/alumni requires significant department-level administrative pitching and scheduling.

[!IMPORTANT] > **Audited Tweak Integrated:** Run the talks during pre-scheduled department lecture times inside classrooms to guarantee audience sizes. Host reads standard liability shield.

[3.2] PG & Outstation Diet Diaries (Refined)

- **Impact Score: Low/Medium**

Rationale: Collects nutritional stress data for students in off-campus housing (PG clusters) to guide off-campus wellness resources.

- **Feasibility Score: Medium/Low**

Rationale: Historically high drop-out rates for multi-day dietary logs, requiring significant volunteer follow-up and student cooperation.

[!TIP] > **Audited Tweak Integrated:** Removes exact addresses and names, identifying off-campus PG cohorts solely by broad regional clusters (e.g., "Hudson Lane PG Cluster").
